

DynamicsIQ Overview

DynamicsIQ has been designed by a team of accountants and IT specialists with over 125 man-years of experience in creating and implementing accounting and business solutions. Designed from the outset for delivery over the Internet, over 30 man-years had been invested in its development before its commercial launch in 2007, with significant ongoing investment in product development to perfect its suitability to its target markets.

Overview of Functionality

DynamicsIQ is a full featured multi-currency business and accounting software solution. Utilising the latest technology, it allows full collaboration across multiple businesses, at anytime from anywhere, via the Internet from a highly secure hosting facility. The functionality of **DynamicsIQ** includes accounting, commercial, business intelligence and paperless office capability which is summarised in the following diagram:

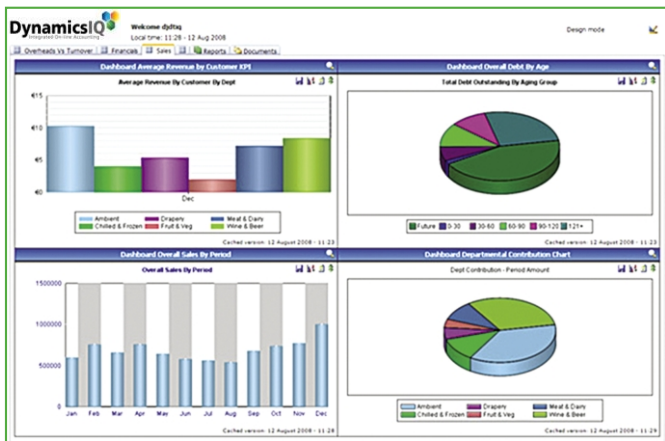

A full list of the features in each module is available on contact – info@dynamicsIQ.com

DynamicsIQ has a modular design so a business can adopt a solution that suits its specific needs initially, but with the option to add additional modules when required. Its Microsoft® SQL Server database engine allows it to scale easily from small to medium sized businesses with large volumes of transactions and users.

Key Features

- Powerful Business Intelligence functionality including extensive ability to track/analyse results by business line, location, department, project, job etc.
- KPIs can be produced based on combination of financial results and user defined statistics, with user-defined management dashboards ideal for real time reporting of a full range of performance measures.

- Microsoft® SQL Reporting Services® supports the creation, management, and delivery of both traditional paper-based reports and interactive, web-based reports. All report details can be output at the touch of a button to Microsoft Word, Excel and in PDF or HTML formats.
- Hosted in a secure SAS 70 Type II certified data centre providing full system redundancy with tier one firewall protection and automatic backups for maximum availability and performance.
- Access to functions, reports and dashboards is controlled based on a user's role and permissions. A full audit trail is maintained of all postings and transaction amendments made by users. Time spent by each user on each entity can be tracked if required.

- Web Services integration layer allows **DynamicsIQ** to be connected with other business systems – e.g. CRM, EPOS etc. to provide an integrated total solution for your business.
- Significant productivity gains and cost savings can be achieved through **DynamicsIQ's** paperless office capabilities with:
 - All documents generated in **DynamicsIQ** can be emailed directly from the system.
 - Make electronic payments and automatically reconcile bank accounts via Internet banking.
 - Store encrypted electronic versions of all relevant business documents against the transactions or accounts to which they relate, for later retrieval.
- Significant contribution to your organisation's green agenda through paperless office and minimising travel through anytime-anywhere access.
- The **DynamicsIQ** pure software as a service (SaaS) model means only a broadband Internet connection is required to access anytime, from anywhere, with no upfront costs. A simple monthly fee covers all costs – hosted IT infrastructure, application support, daily backups, disaster recovery and ongoing software updates.
- Full multi-currency processing for all sales, purchases and bank transactions including automatic posting of exchange gains & losses.
